Projects

VariAlt

An Android flight computer app for hang gliding. See vertical velocity, altitude and other flight data in real time and store it to track performance. Flight path can be viewed on Google Maps.

Key Technologies: Java, Android Studio, Google Maps, SQLite

.Gifs Against Humanity

(To start the game, open in 5 tabs to simulate the required 5 users or play with a group of friends!)

A multiplayer web game similar to Cards Against Humanity. Players submit .gifs as answers to queries. A rotating "selector" player chooses the funniest .gif answer as the winner.

Key Technologies: Websockets, Node.js, Express, Web API.

Camellia

An online tea store front-end built with the Angular.js framework. Users can select teas to add to their cart and make adjustments along the way. Search and filter mechanisms are in place to help the user find desired products.

Key Technologies: Angular.js, Express, PostgreSQL, Heroku.

Education

Galvanize

Denver, CO
